SUMMARY

Flutter Developer with 2+ years of experience building production mobile applications for a live B2B platform. At Promilo, built and shipped key features including an AI assistant integration, a dynamic API-driven form rendering engine, and a local analytics event tracking system using Clean Architecture and MobX. Additionally engineered a real-time performance analytics SDK with AI-driven bottleneck detection, a Node.js/PostgreSQL backend, and a Flutter Web dashboard. Experienced in Firebase integration, mobile test automation with Appium, and Google Play Store release management.

TECHNICAL SKILLS

Programming Languages	Dart
Mobile Development	Flutter, Android, iOS, Cross-platform mobile development
Architecture	Clean Architecture, MVC, Agile, Scrum
State Management	MobX, BLoC, Provider
Firebase	FCM, Authentication
Backend Development	Node.js, Express, REST API Design
Databases	PostgreSQL
Testing & Automation	Appium, Flutter Integration Driver, Unit Testing, Widget Testing, Mobile Test Automation
Tools & IDEs	Git, Android Studio, VS Code, IntelliJ
Deployment	Google Play Store, App Versioning, Release Management

WORK EXPERIENCE

Flutter Developer – Promilo (Sawara Solution Pvt Ltd)

Mar 2024 - present

- Built and shipped production features for Promilo, a B2B platform connecting businesses and students through AI-powered campaigns and a college-to-career mobile app.
- Integrated the Milli AI Assistant into the Promilo app, enabling conversational AI features through REST API calls and rendering dynamic AI responses within the Flutter UI.
- Built a dynamic form rendering engine where business-configured fields (text inputs, dropdowns, checkboxes) are fetched from the API and rendered conditionally at runtime, eliminating hardcoded UI logic.
- Implemented a local analytics event tracking system to capture user interactions and app behaviour, providing visibility into feature usage and user flows.
- Translated Figma designs into pixel-accurate Flutter widgets, maintaining design consistency across screens in collaboration with the design team.
- Architected the app using Clean Architecture and MobX state management, improving separation of concerns and making feature modules independently testable and maintainable.
- Built and maintained an Appium-based mobile test automation framework in Java, covering core user flows and reducing manual regression effort.
- Managed production builds, versioning strategy, and release cycles on Google Play Store.

PERSONAL PROJECT – AI PERFORMANCE INTELLIGENCE PLATFORM

Jan 2024 – Mar 2026

- Engineered a Flutter Performance Analytics SDK to collect real-user metrics including render times, frame drops, interaction latency, and crash events.
- Designed secure telemetry ingestion using API key authentication with key rotation and unique app identity management.
- Built a high-throughput backend using Node.js and PostgreSQL for real-time metric ingestion and structured performance analysis.
- Integrated AI-based performance analysis (Gemini API) to automatically detect bottlenecks and generate optimization recommendations.
- Developed a Flutter Web dashboard with JWT-based authentication for real-time visualization of severity metrics and AI insights.
- Architected clear separation between SDK, backend, and dashboard layers to ensure scalability and maintainability.
- Deployed backend APIs and dashboard to production and published the SDK as a reusable Flutter package on pub.dev.

EDUCATION

2022 - 2023 Flutter Development – Brototype, Calicut
2019 - 2021 Diploma in Land Surveying – Government ITI, Areekode
2017 - 2019 Higher Secondary (Class 12) – DHSE, Kerala
